

ALBERTO CATALÁN

DEVOPS

CERTIFICATION

- **AWS Certified Solutions Architect – Associate**
- **Amazon Web Services (AWS)** | Expiration: May 2027
- **AWS Certified Cloud Practitioner**
- **Amazon Web Services (AWS)** | Expiration: November 2026
- **DevOps on AWS: Cloud Technical Essentials**
- **Amazon Web Services (AWS)** | December 2022
- **DevOps on AWS: Code, Build, and Test**
- **Amazon Web Services (AWS)** | November 2022
- **Crash Course on Python**
- **Google** | January 2023
- **Scientific Computing with Python FreeCodeCamp** | December 2022
- **What is Data Science?**
- **IBM** | January 2023

PROFESSIONAL EXPERIENCE

DevOps Engineer

*Urbani · Full-time |
Monterrey, Nuevo León, México (Remote)
March 2025 - Present (1 year 4 months)*

In my current role as a DevOps Engineer, I am responsible for the design, deployment, and maintenance of scalable, secure, and resilient cloud infrastructure on AWS.

- **AWS Infrastructure:** Managed extensive use of services including Elastic Beanstalk, EC2, RDS, Lambda, Secrets Manager, S3, CloudWatch, CloudTrail, CodePipeline, CodeBuild, CodeDeploy, and IAM.
- **CI/CD Implementation:** Lead the design and maintenance of pipelines using AWS CodePipeline, integrating source control, build, and deployment stages for automated delivery across dev, QA, and prod environments.
- **Environment Management:** Customized Elastic Beanstalk configurations and deployed Node.js applications using .platform hooks and Nginx reverse proxy configurations.
- **Database & Serverless:** Configured Amazon RDS for relational needs and integrated Lambda functions triggered by specific events or endpoints.
- **Monitoring & Security:** Enhanced visibility and auditing via CloudTrail and CloudWatch; enforced least-privilege access through IAM roles and policies.

DevOps Engineer

**Samsung Electronics (SRT) Parque Industrial
El Florido II, 22244 Tijuana, B.C. (Remote)
April 2024 - Present**

Container Orchestration: With my knowledge of Kubernetes, I lead container orchestration efforts, improving deployment speed and reliability for new features. This initiative has facilitated smoother releases and better resource management across our platforms.

Development Environment Consistency: My experience with Docker streamlines development by creating consistent environments for testing and production. This reduces compatibility issues and accelerates onboarding for new team members, fostering a more efficient workflow.

Programming and Data Analysis: Leveraging my programming skills in Java and Python, I enhance backend services for ad delivery and develop predictive models to optimize ad targeting strategies based on user behavior. Through these contributions, I play a vital role in enhancing the reliability and effectiveness of Samsung Ads, ensuring we meet our business objectives while delivering exceptional user experiences.

EXPERTISE

- Devops, Cloud & IT.
- AWS, Azure & GCp
- Python, Java, etc.
- Data Science
- Airflow
- PagerDuty
- Slack
- Jira - Confluence
- Terraform
- Docker
- Kubernetes

LANGUAGE

- English: Proficient (C2)
- Spanish: Native

EDUCATION

- University of Sonora
Bachelor's Degree
2014-2023

In my role as a Junior Site Reliability Engineer at Nanti System, I focused on ensuring the availability and optimal functioning of our systems. My key responsibilities included:

System Monitoring and Incident Response: I was responsible for monitoring system performance and quickly restoring functionality impacted by incidents. My proactive approach ensured that our systems remained secure and resilient against potential threats.

Automation of Operations: I developed automation scripts that facilitated continuous integration and deployment processes. This not only improved the reliability of our deployments but also reduced the time required for release cycles, allowing for more frequent updates.

Cross-Functional Collaboration: I collaborated with product managers and developers to translate loosely defined requirements into actionable solutions. This teamwork was crucial in aligning our technical efforts with business needs, ultimately leading to improved project outcomes.

Technical Debt Management: I actively worked on identifying and addressing technical debt within our systems, contributing to a more maintainable and efficient codebase. By implementing best practices in software development life cycles (SDLC), I helped foster a culture of continuous improvement.

Documentation and Best Practices: I developed and documented best practices for site reliability and operational workflows, which improved knowledge sharing among team members and facilitated smoother operations.

My time at Nanti System solidified my foundation in site reliability engineering, enhancing my skills in managing complex systems and improving overall service delivery.

Website Manager

Fidere Seguridad — San Benito Fronteras 187, Hermosillo, México
February 2020 - November 2022

As Website Manager at Fidere Seguridad, I was responsible for overseeing the operation and maintenance of our online presence. My key achievements included:

Website Operations Management: I managed the daily operations of the company website, ensuring its availability, performance, and security. This involved regular updates, content management, and troubleshooting any issues that arose.

Optimization of Deployment Processes: I streamlined the deployment processes for website updates, utilizing automation tools to ensure consistent and efficient updates. This not only reduced downtime but also enhanced user experience.

Collaboration with Stakeholders: I worked closely with marketing and sales teams to align the website's functionality with business objectives. This included implementing features that improved user engagement and conversion rates.

Best Practices Documentation: I created comprehensive documentation outlining best practices for website management, which facilitated smoother operations and served as a training resource for new team members.

Technical Skills Development: During my tenure, I enhanced my technical skills, particularly in web development and operations, laying the groundwork for my transition into a more technical role in DevOps.

My role at Fidere Seguridad not only honed my skills in website management but also sparked my passion for operational excellence and system reliability.

SUMMARY

I am an experienced DevOps Engineer with over 5 years in software engineering and operations. My expertise lies in designing and implementing CI/CD processes, automating deployments, and managing cloud infrastructures. I am a strong collaborator with excellent communication skills, committed to reducing technical debt and improving system reliability. With a solid foundation in solution architecture and site reliability engineering, I am well-equipped to tackle complex challenges in the DevOps landscape and contribute significantly to any organization's success.
